

Congratulations

In anticipation of their much-awaited launch later this year, West Point Hospital has purchased a new Philips Brilliance™ CT 16-Slice Configuration CT-Scanner, as part of its continued effort to improve its services and better meet the needs of its patients.

West Point Hospital is sporting a fresh new look, with a newly renovated 24-hour accident and emergency unit, complete with an outpatient clinic that operates round-the-clock and providing general medical and specialist services. With the Hospital's multi-disciplinary specialist clinics, patients also have ease of access to doctors from different specialty areas, including respiratory, orthopaedic, ENT, cardiology, gastroenterology, oncology and eye clinics, as well as a Traditional Chinese Medicine clinic. Patients are also able to use their CPF Medishield for these services.
